

Drones

A flying Internet of Things
and a coming regulatory nightmare?

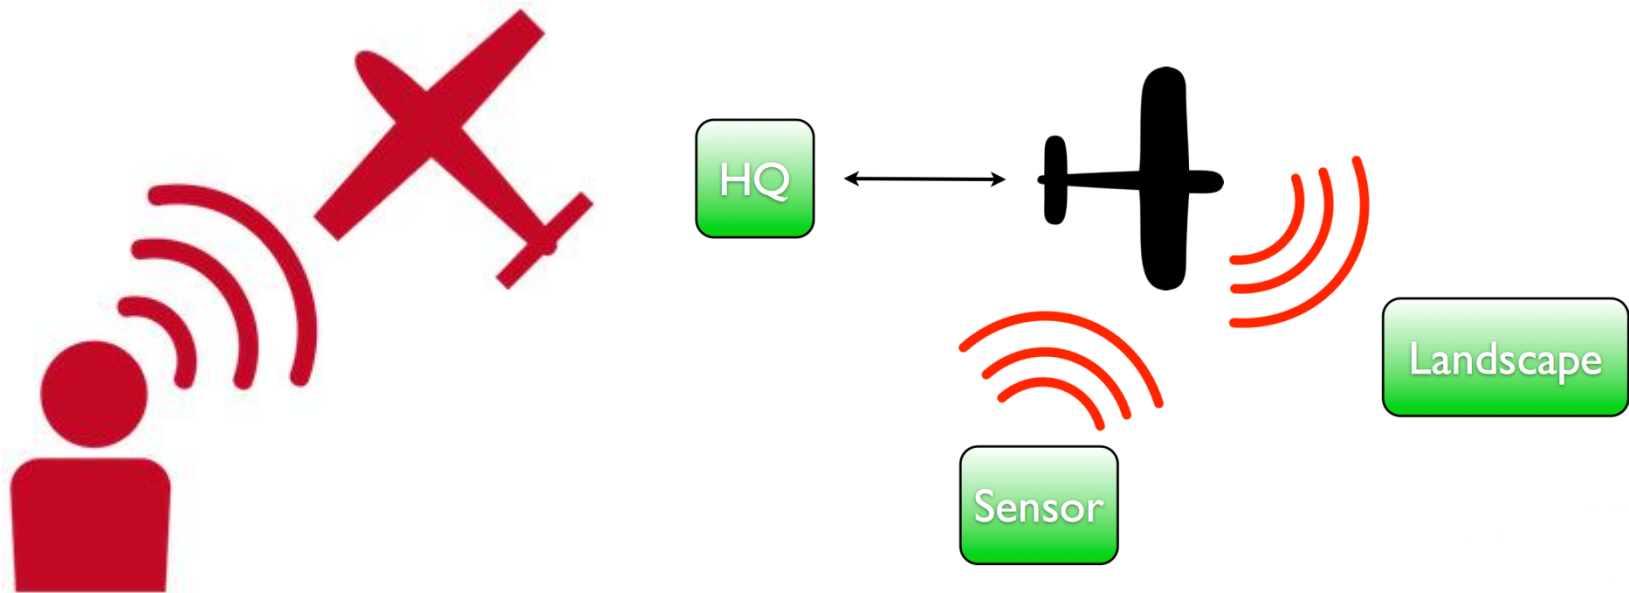

Chris Swan
@cpswan

Drones are fun, and cool

Drones can help humanity

openrelief

Drones also have more questionable uses

Pirate Bay plans to build aerial server drones with \$35 Linux computer

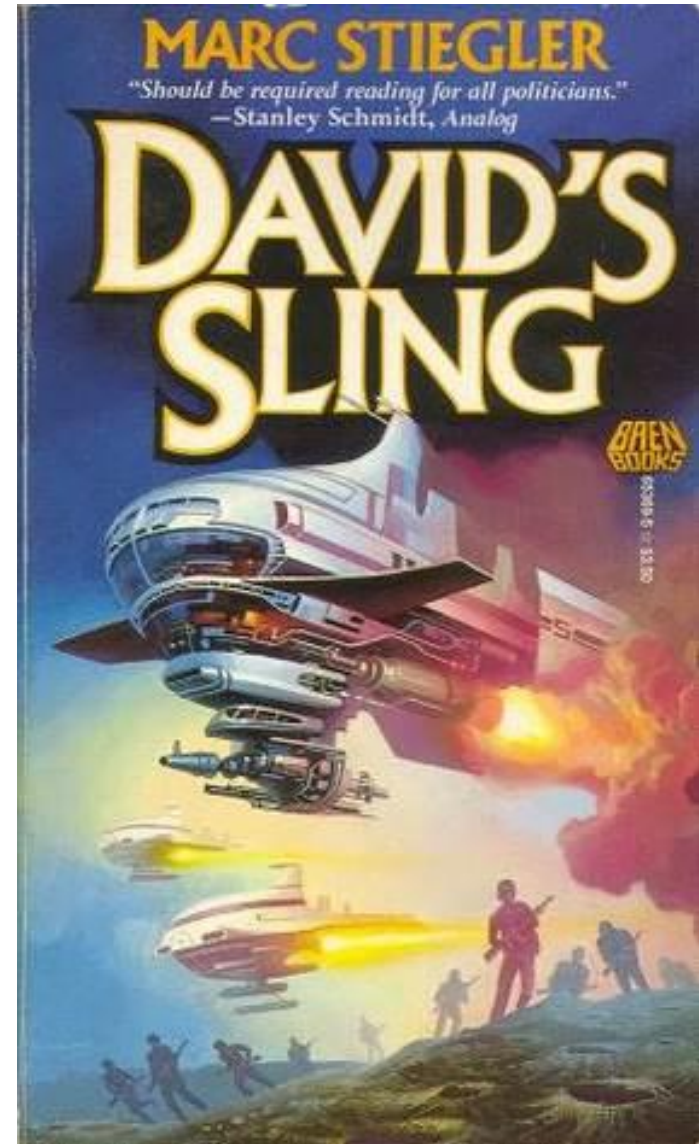

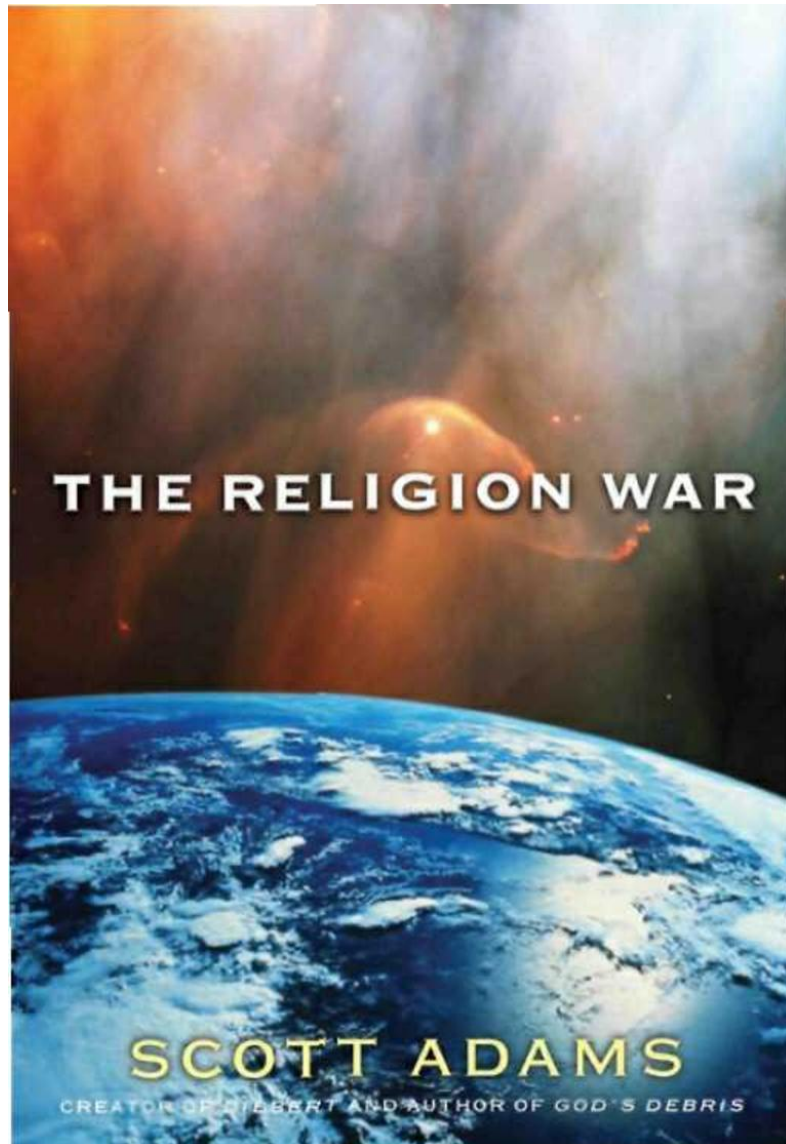

The Pirate Bay has announced plans to build a fleet of flying server drones ...

Fresh from performing at Science Gallery in Dublin last night during the opening of Hack the City, an English group of urbanists, technologists and architects who created GPS-enabled quadcopter drones, were held at London Southend Airport on suspicion of terrorism and recorded under the UK's Terrorism Act.

The group, known as Tomorrows Thoughts Today, had been performing their Electronic Countermeasures robotic ballet in the sky show at Science Gallery for the opening of the three-month Hack the City exhibition in Dublin City.

The trio, headed up by Liam Young, had created the robotic drones from components that were originally intended for police surveillance.

So is this what happens next?

1. Drones become more and more popular as kids/hackers toys
2. Eventually a drone is used in a real terrorist plot
3. Our politicians over react and ban drones
4. We all write tweets and blogs about what clueless morons our politicians are because the whole thing has been widely understood for some time
5. Drones don't get unbanned for use outside of police/law enforcement because of whining from the hacker community

Thanks for listening

I'll be around later if you have
questions
