

Financial Services Head in the cloud

December 2010

Version 1.0

Why me

The guy from the big bank couldn't make it

I used to be a Director of IT R&D at a big bank

I now run a cloud only infrastructure at a boutique

Agenda

Cloud definition – so we're all on the same page

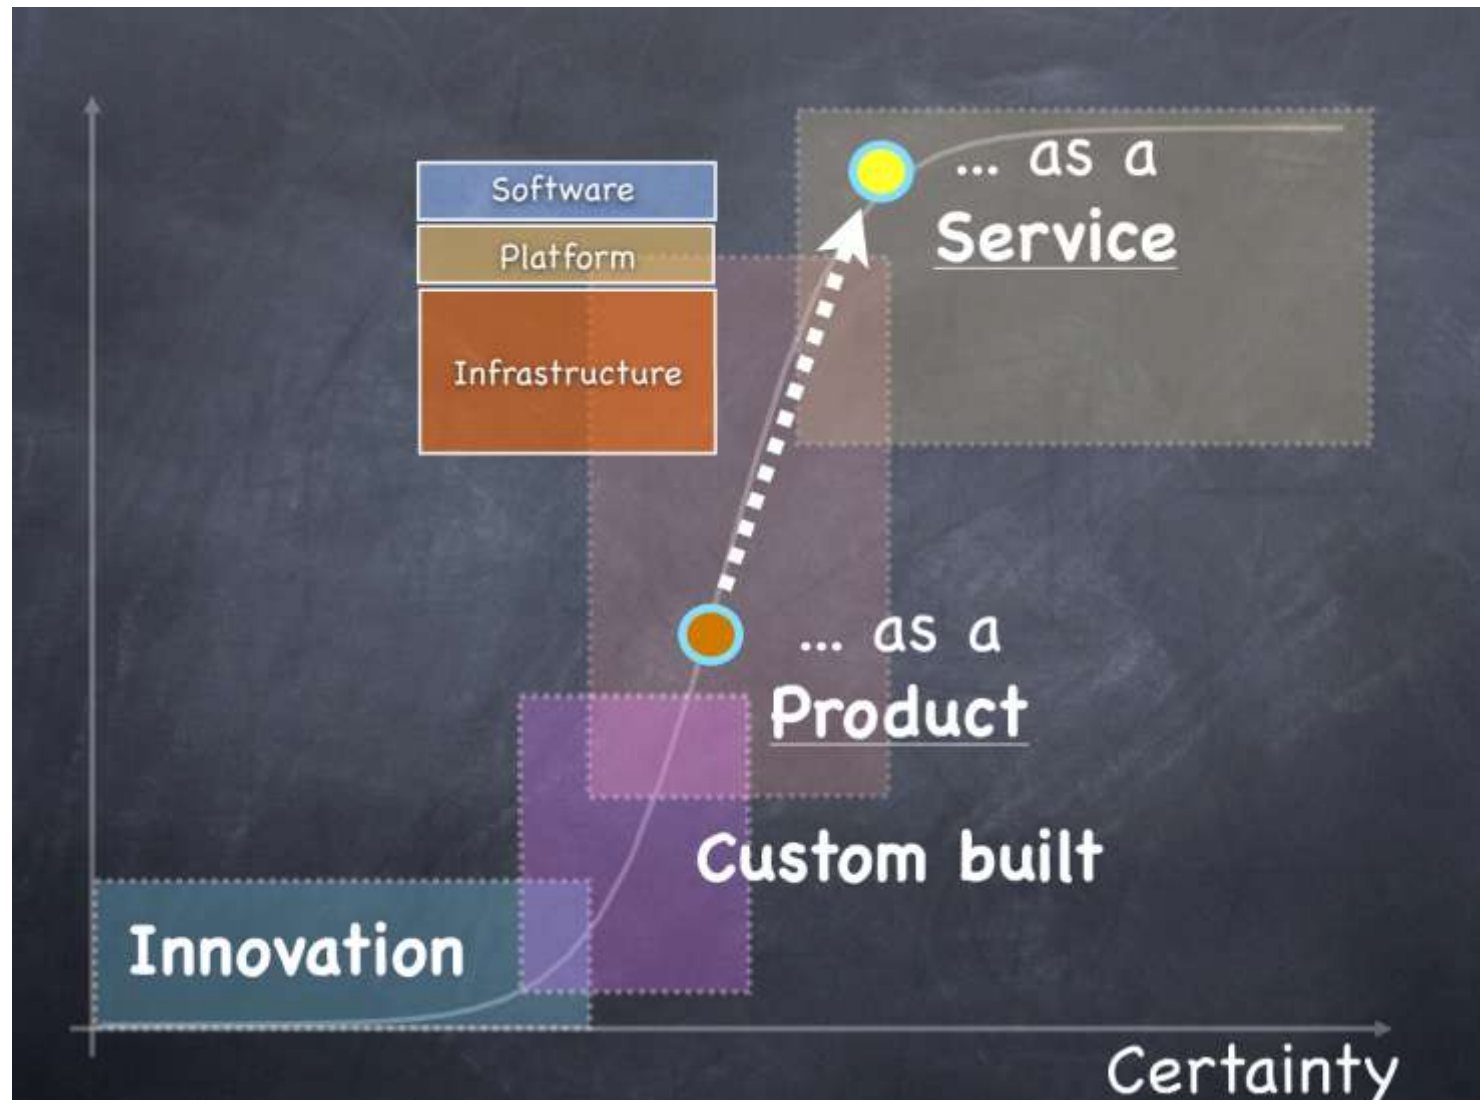

The excuses

Financial services already is in the cloud

Who gets to be the prime broker to the tier 1s?

What are we talking about?

What's 'cloud' all about?

The excuses

Cloud isn't secure

AWS Completes SAS70 Type II Audit

Amazon Web Services has successfully completed a Statement on Auditing Standards No. 70 (SAS70) Type II Audit, and has obtained a favorable unbiased opinion from its independent auditors. SAS70 certifies that a service organization has had an in-depth audit of its controls (including control objectives and control activities), which in the case of AWS relates to operational performance and security to safeguard customer data. AWS will continue efforts to obtain the strictest of industry certifications in order to verify its commitment to provide a secure, world-class cloud computing environment.

Amazon Web Services Achieves Level 1 Payment Card Industry (PCI) Compliance

Merchants, enterprises, and service providers can now implement a cardholder environment on AWS that complies with PCI Data Security Standard

SEATTLE--(BUSINESS WIRE)--Amazon Web Services LLC (AWS), a subsidiary of Amazon.com, Inc. (NASDAQ: AMZN), today announced it has achieved Level 1 compliance with the Payment Card Industry (PCI) Data Security Standard (DSS). Merchants and other service providers can now run their applications on AWS PCI-compliant technology infrastructure to store, process and transmit credit card information in the cloud. Customers can use AWS cloud infrastructure, which has been validated at the highest level (Level 1) of PCI compliance, to build their cardholder environment and achieve PCI certification for their applications. To learn more about AWS security certifications and other AWS security practices, visit <http://aws.amazon.com/security/>.

My regulator won't let me

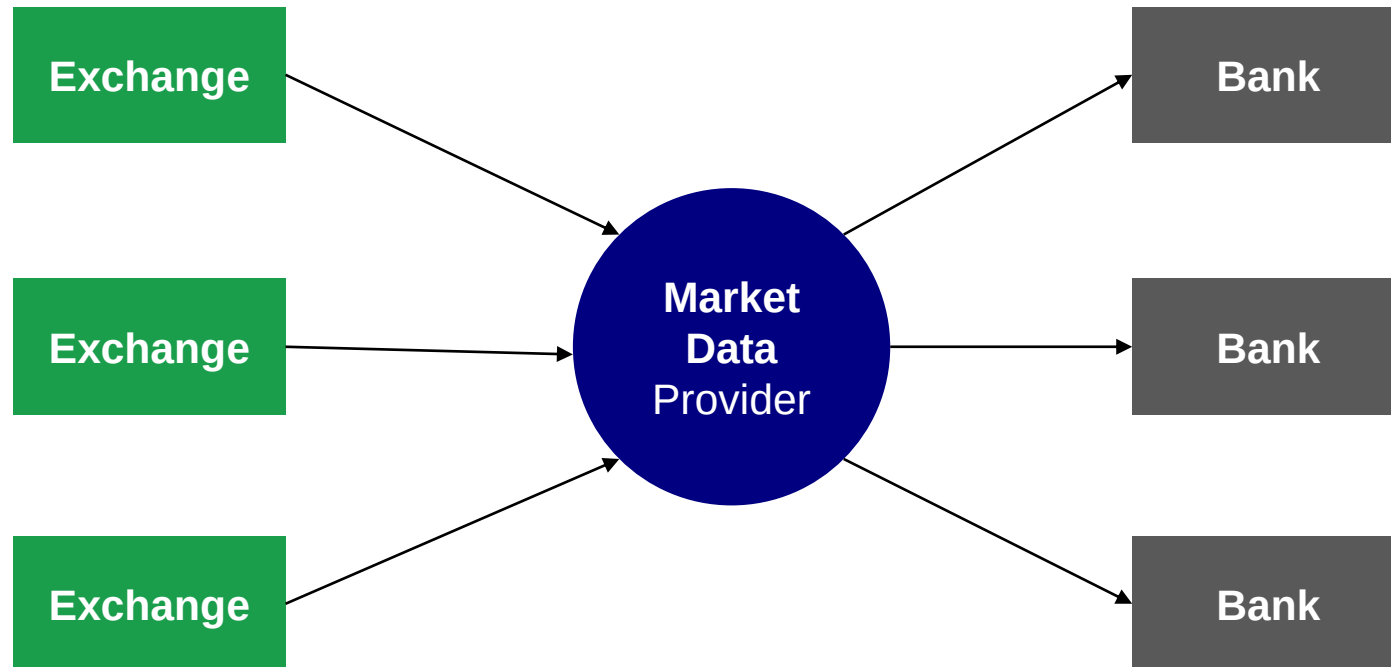

I'm so big I can build my own

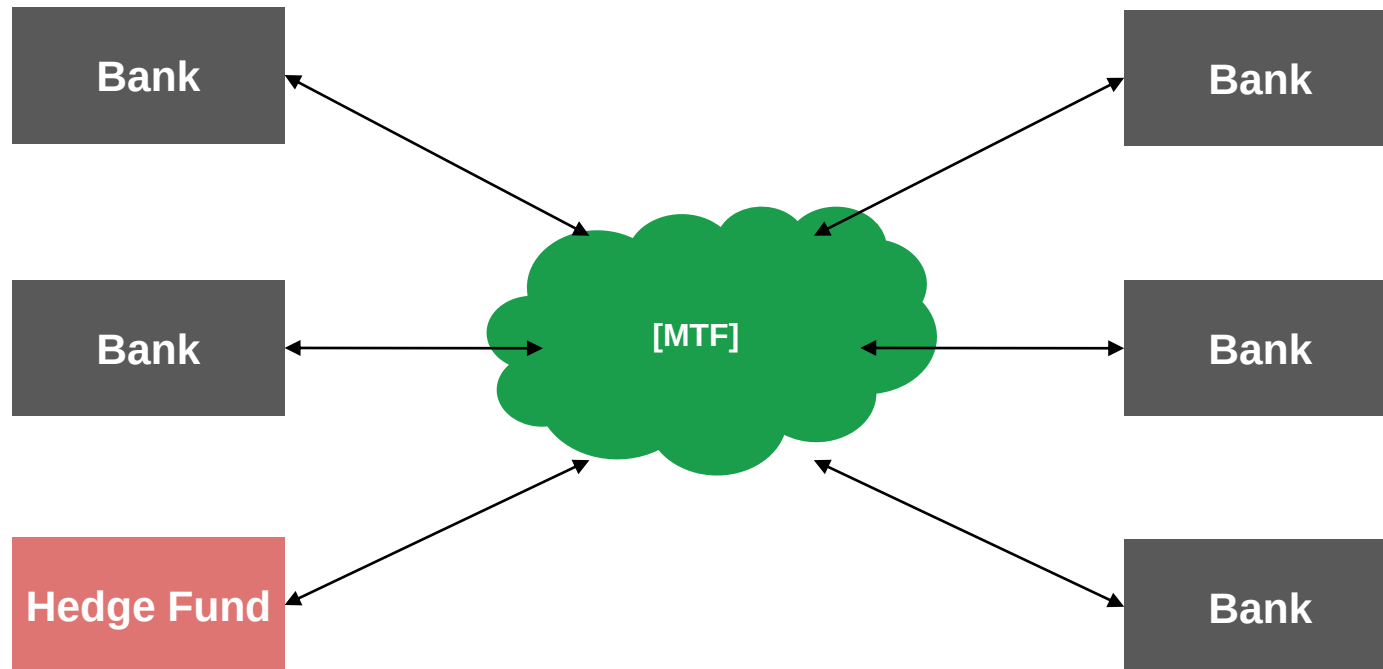

Financial services already is in the cloud

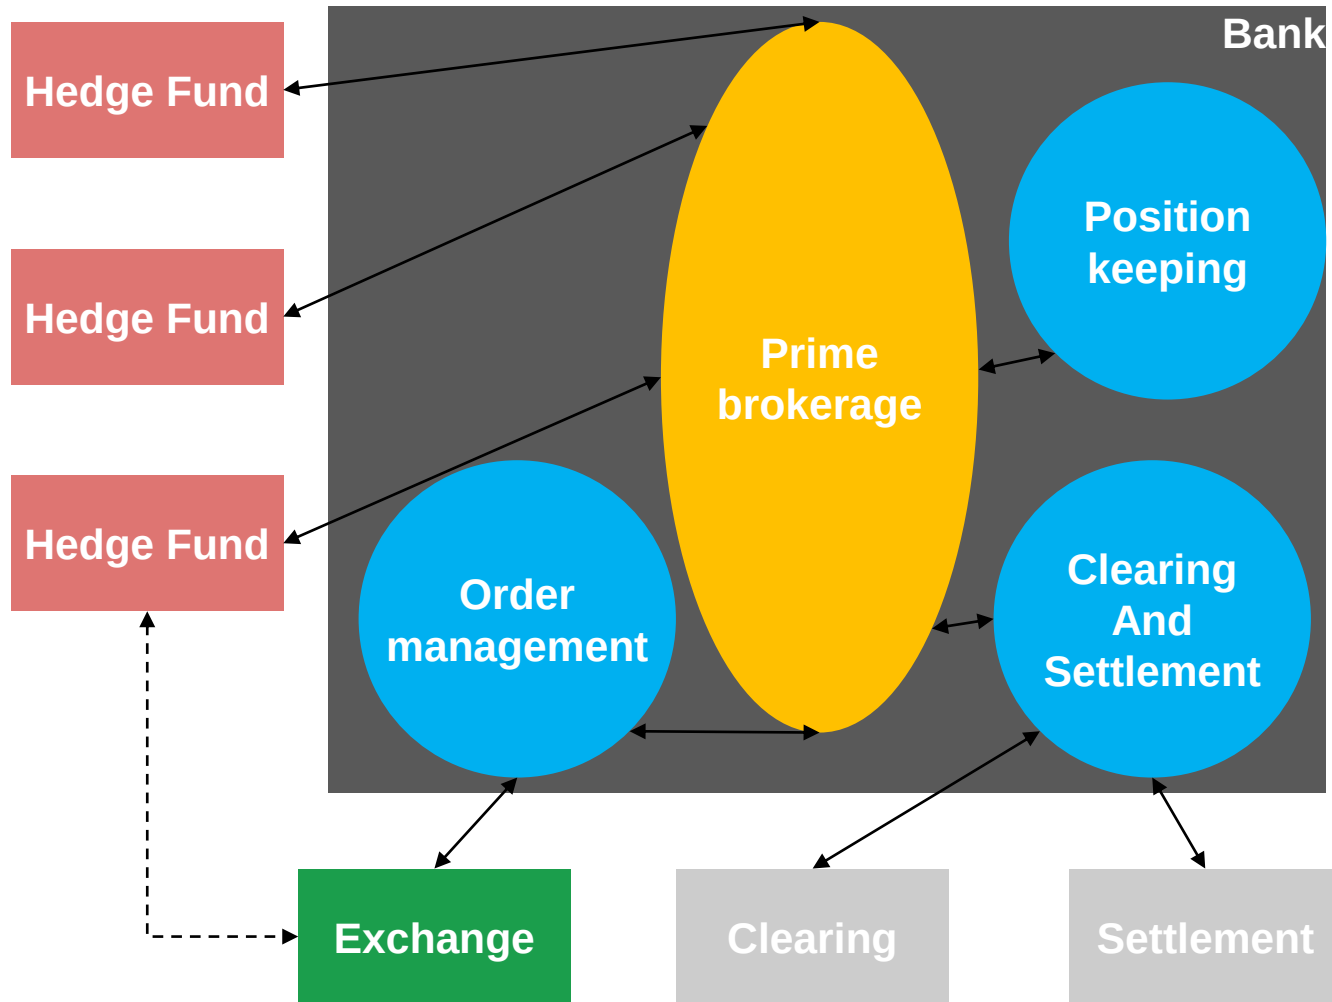

Market Data

Multi Lateral Trading Facilities (MTFs)

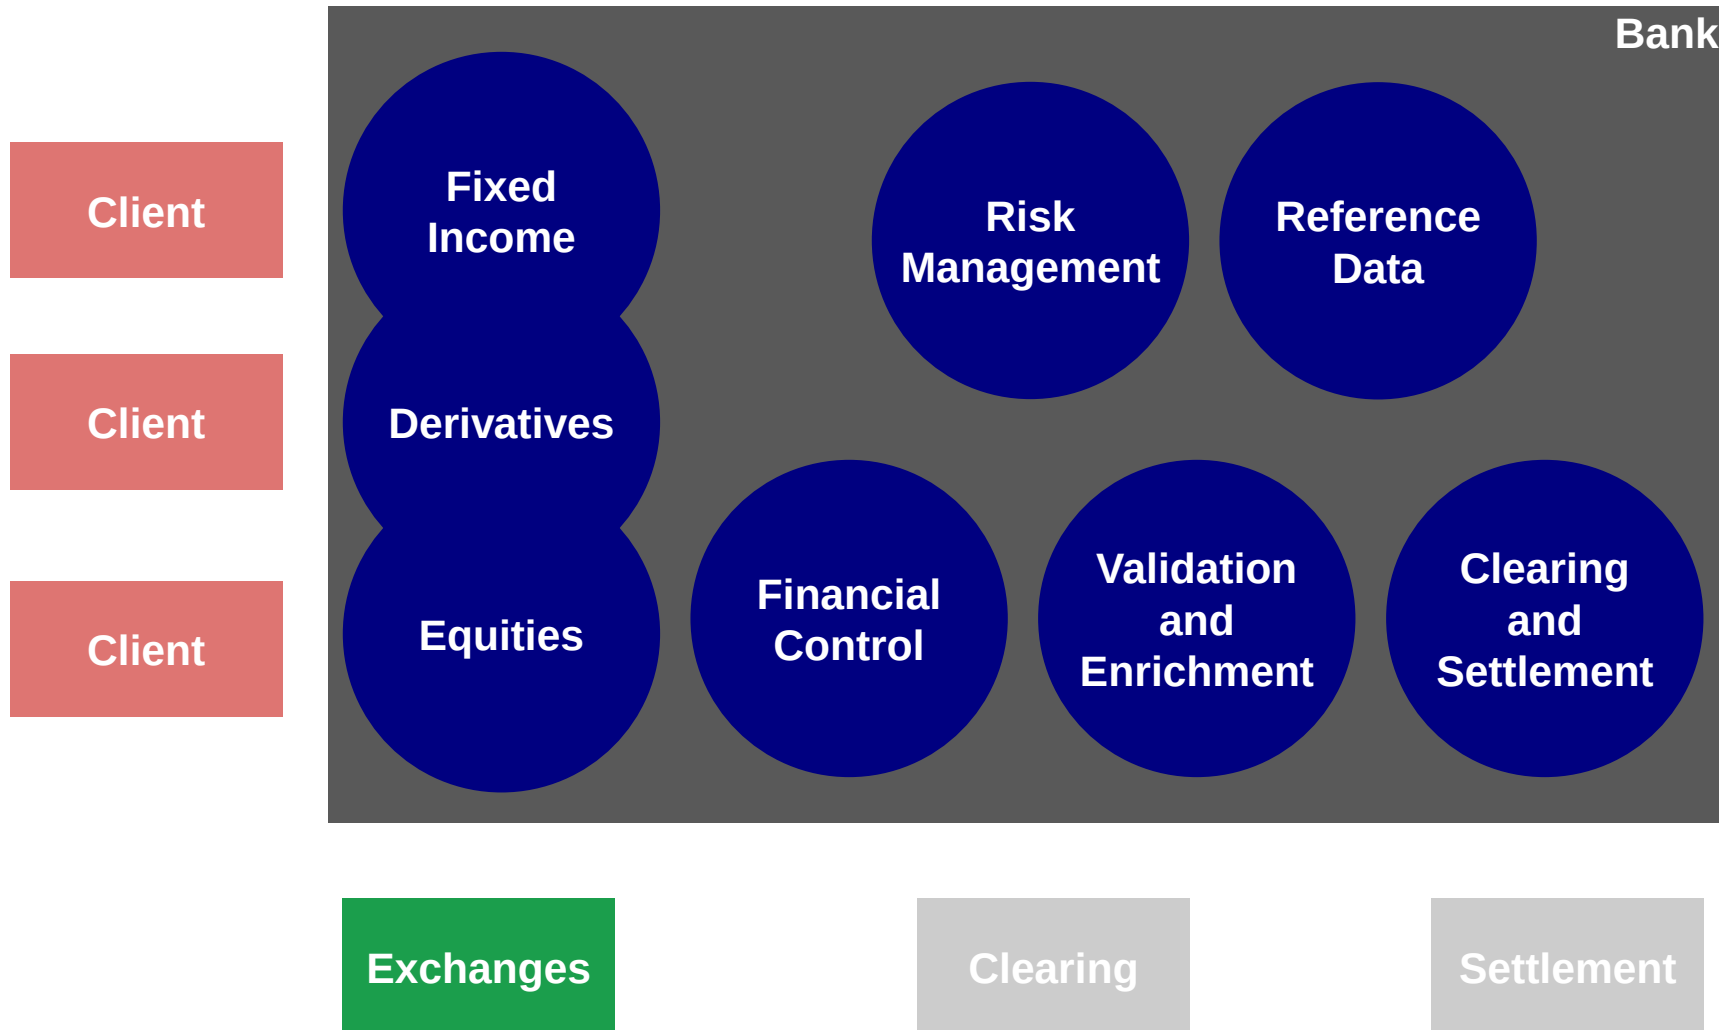

Prime brokerage

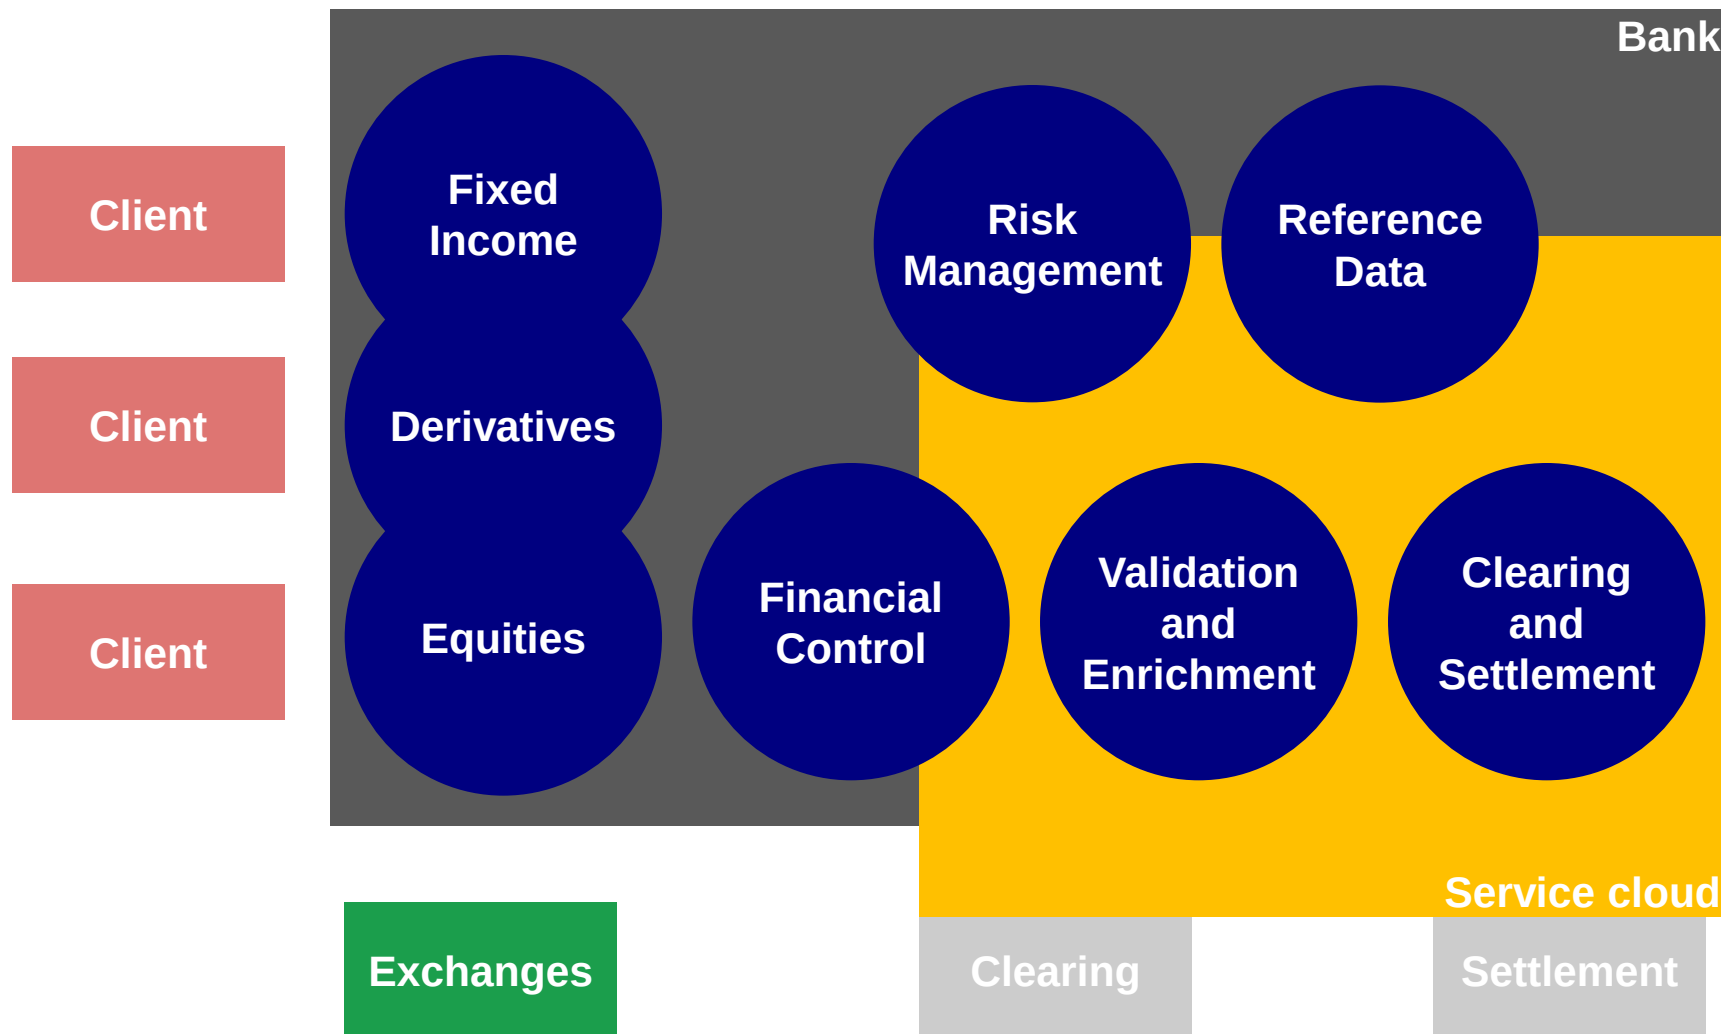

Who gets to be the prime broker to the tier 1s?
